ALFRED JERVIS.

Reid's NURSERIES

INTRODUCTION.

WE HAVE pleasure in again sending to our friends and patrons our **Handy Pocket Price-List**, which has met with such general approval as being concise and easy of reference. (Anyone desiring full and descriptive catalogue can obtain it on application to us.)

Never before in the history of the Nursery trade has there been an opportunity to purchase stock at such low prices as we now offer. All have thus a chance to plant orchards at a merely nominal cost; and what improves an estate or farm so much as a good orchard? No better investment can be made, even without considering the health-giving influence of the abundant use of fruit.

Our stock for fall is unusually fine, having had one of the best growing seasons for many years. We can therefore guarantee that no better stock can be had anywhere, or more carefully grown. We further guarantee our stock to be up to grade, free from all diseases or obnoxious insects, carefully handled, and packed in the best manner to insure arrival in good condition.

Of our recent introductions of fruit, we can specially recommend the **Eldorado Blackberry** and the **Star Strawberry**, both of which have fully borne out our claims. In order to have these sterling small fruits more generally planted, we have considerably reduced the prices. We also offer many other valuable varieties, new and old.

Estimates cheerfully furnished at lowest possible prices, and correspondence invited from intending purchasers.

Address

REID'S NURSERIES,
BRIDGEPORT, OHIO.

TERMS AND ADVICE.

CASH WITH ORDER. Address all Mail to **Reid's Nurseries**, Bridgeport, Ohio; we have a special pouch from the Post Office. Remit by Post Office or Express Money Order, or Draft on New York or Chicago.

C. O. D. We will send stock in this way, provided one-fourth the amount is sent with the order, and the purchaser pays return charges on the money.

ORDER EARLY. You have everything to gain by sending in your order early. Don't delay, as some stock is apt to be exhausted before the season ends.

ESTIMATES will be cheerfully furnished on large orders. In many cases we can quote less than catalogue rates where our stock is in surplus.

OUR PRICES include packing. Orders are delivered free to the forwarders here, when our responsibility ceases. In case of delay, we will do our utmost to expedite delivery.

SHIPPING FACILITIES. No Nursery in the country has better means of transportation than we, as we can reach every point in the land over the following roads and connections: B. & O.; P., C., C. & St. L.; C. & P.; W. & L. E.; C., L. & W. (which is run by the Big Four in connection with the L. S. & M. S.), and the Ohio River Railroad. We can also ship by the Ohio River steamers, which are very handy, and their freight rates are low.

FORMER PRICES are set aside, as this list abrogates all previous prices.

GUARANTY. All our stock is true to name and carefully labeled; yet, while we exercise the greatest care to do this, we will not be held responsible for any sum greater than the cost of stock, and when varieties become exhausted we reserve the right to substitute others of the same class and value, except when orders are marked "No substitution."

PACKING SEASON. We commence packing about the 1st of October, and continue till the ground freezes—usually about the 15th of December.

Fruit Trees.

FALL PLANTING. Those who contemplate planting trees in the near future will do well to set in the Fall. This is the best time to set all kinds of nursery stock that is hardy and will stand the Winter. It is not only the best, but can be done to better advantage than in the Spring. The ground is in better condition, you are not so rushed for time, and the work can be more thoroughly done. Still further, a tree set in November will make twice the growth the following Summer of one set in April.

There is no necessity for a planter who understands the art of setting to miss a single tree. We recommend Fall as the best time in the year to set trees.

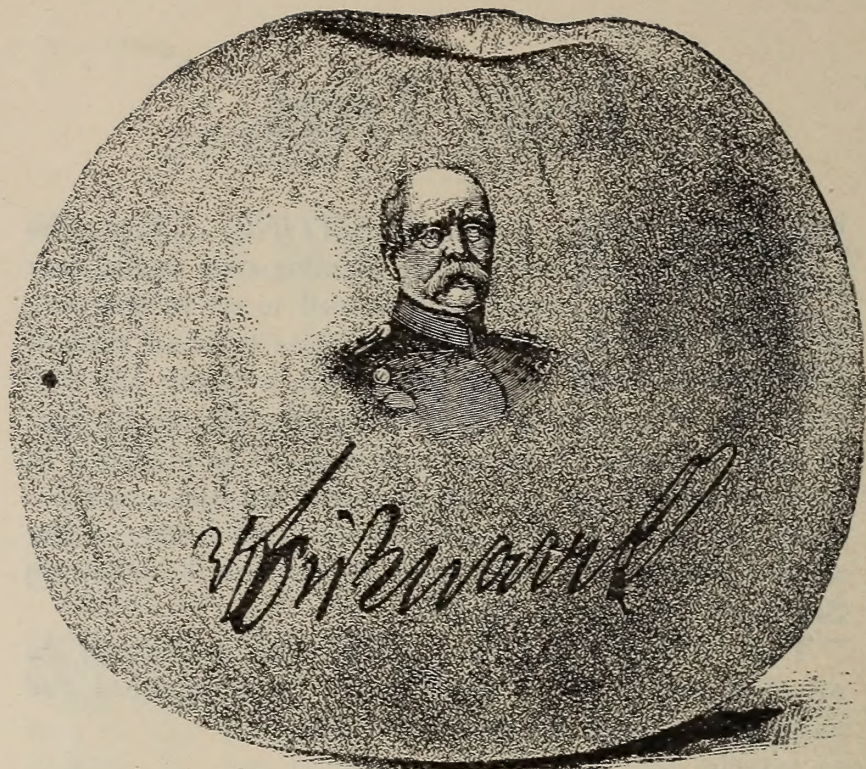

Apples.

The first fruit, both in importance and general culture, is the Apple. Its period, unlike that of other fruits, extends nearly or quite through the year. By planting judicious selections of summer, autumn and winter sorts, a constant succession can be easily obtained of this fruit, so indispensable for family use. There is no farm crop which on the average will produce one-fourth as much income per acre as will a good Apple orchard. Prices as follows, except where noted. Boxed and baled free.

Thousand rates on application.

Hewes' Va. (Cider),	Quaker Beauty,	Transcendent,
Hyslop,		Whitney.

Pears.

The Pear, like most other things highly desirable and valuable, cannot be had without attention, labor and skill. The relative price of the apple and Pear being about as 1 to 10, shows at the same time the superior value of the latter, and the greater skill required to bring it to perfection. Summer Pears should be gathered at least 10 days before they are ripe, and autumn Pears at least a fortnight. Winter varieties, if they will hang so long, may be left until the leaves begin to fall.

Peaches.

The Peach tree requires a well-drained, moderately rich soil; a warm, sandy loam is probably best. To preserve the continued healthy growth of the trees and the fine quality of the fruit, the trees should have the shoots and branches shortened every year, so as to preserve a round, vigorous head with plenty of young wood; and the land should not be seeded to grass, but kept in constant cultivation in hoed crops.

LORENTZ. A seedling discovered in Marshall county, West Virginia, and which we carefully watched several years before deciding to offer to the public. We are now more than ever convinced that this is something better than has ever been offered for a Peach so late in the season. We have never known it to fail a crop in the most adverse seasons, and believe it as near frost-proof as any variety yet introduced. It bears crops when others fail entirely. Fruit is unusually large and of a superior flavor, especially for one so late in the season. It is a freestone, yellow-fleshed, and its handsome appearance has been a surprise to all who have seen it. It bears enormously, one foot of wood cut for photograph-

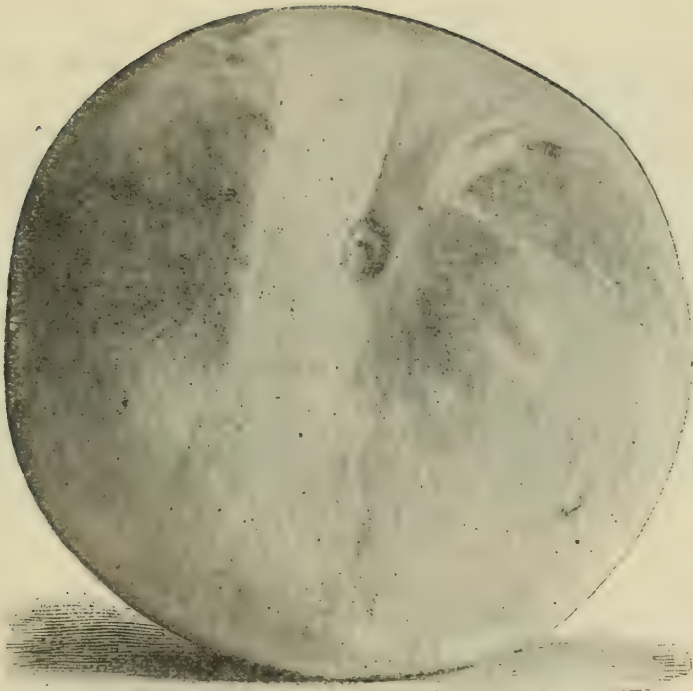

LORENTZ PEACH. (Half natural size.)

PEACHES, continued.

ing having as many as 25 Peaches on, and frequently requires thinning from overproduction. We feel confident Lorentz is the best late Peach ever introduced; does not crack, is very firm, keeps well, and is a fine shipper, at prices double those obtained for any other late Peach on the market. We have a large demand for the trees where known, and as the stock is somewhat limited, would advise patrons to order early.

Plums.

The Plum, like the pear and other finer fruits, attains its greatest perfection on our heavy soil, being entirely free from disease. The curculio, a small, dark brown beetle, often stings the fruit, causing it to drop off; but the following directions, faithfully observed, will secure a good crop of this splendid fruit everywhere.

As soon as the blossoms are fallen, spread two sheets under the tree, and give the tree a sudden jar by striking a smart blow with a hammer upon the stub of a limb sawed from the tree for the purpose; the insects will drop on the sheet, and can be killed. Collect all the fallen fruit and burn or feed to swine. Repeat the operation every day for two or three weeks. It should be done before sunrise.

Cherries.

The Cherry tree universally requires a dry soil, and is naturally a hardy tree, succeeding in the lightest soil or dryest situations. The Heart and Bigarreau varieties are of rapid growth, with large, glossy leaves, forming fine pyramidal-shaped heads, and producing large crops of luscious fruit; are well adapted for planting along streets, or in yards as shade trees.

Nut Trees.

Nut culture is an industry that until recently has received but little attention. The large returns of \$25 to \$50 from individual trees, and the immense profits from established orchards, have stimulated the interest, and our foremost enterprising fruit-growers are planting nut trees largely for market purposes; and others who enjoy the nuts during winter are realizing that in order to have an abundant supply it is only necessary to plant the trees, as hardy varieties are now grown that succeed in all sections of the United States.

Strawberries.

STAR. This berry is large and handsome in appearance, measuring 6 to 7 inches in circumference, on the average. It is as near perfection in shape as possible, somewhat resembling the Gandy, but not quite so dark in color. It is a beautiful glossy crimson, and colors all over at the same time, being an ideal berry in this respect. All the berries average large from first to last, with no small or ill-shaped berries throughout the entire season. In quality it is of the best. All who have tested it pronounce it the best they have ever eaten.

In productiveness we have never seen the equal of the Star. It matures all its berries in a dry season, possessing the greatest drought-resisting qualities of any berry we are acquainted with, having matured a full crop when all the ordinary varieties were complete failures. The plant is a vigorous and strong grower, with healthy green foliage, deep-rooted and very prolific, being a staminate, or perfect variety. Season of ripening is second early.

ELEANOR. This Strawberry is a chance seedling found in Atlantic county, N. J., and has been thoroughly tested in field culture for several years. It is the earliest large berry and the most prolific early variety yet offered.

STRAWBERRIES, continued.

BISMARCK. This is a seedling of Bubach No. 5, pollenized by the Van Deman. The plant resembles No. 5

in every way, only is more robust and stocky, with the same ironclad foliage. The berries are produced in abundance, outyielding No. 5; shape obtuse conical, never cox-combed; it is the heaviest berry we have ever seen or grown; color bright scarlet, no green tips; very firm, good flavor and shipper. Season medium to very late. Blossom perfect.

CHAMPION OF ENGLAND. This berry was brought from England by an English gardener some years ago, and has been kept and grown by him exclusively for market. The plant is one of the strongest grown, very large and healthy. It has also a perfect blossom, and is medium early. The fruit is immense in size; 14 berries have been picked from it that filled a quart basket. The berry has a bright, polished surface, and is unusually firm for so large a fruit.

BRUNETTE. Mr. G. Cowing, the originator, with whom it has fruited seven years, has described it thus: "Its berries are above medium size, round, and almost invariably perfect; of a dark mahogany color when fully ripe—a shade darker than Warfield—and without any white tip. The plant is a strong grower, and as free from rust as any variety now cultivated. Flower perfect. The fruit is quite firm, very handsome, and remarkable for its exquisite flavor."

COLUMBIA, IND., August 1, 1896.

Dear Sirs—I would like to have another catalogue. All the plants and trees I received from your nursery in the spring have given perfect satisfaction. Respectfully yours, HENRY SELBY.

CANTON, O., Nov. 27, 1896.

Dear Sirs—The 295 Plum and other trees came in good condition. Accept thanks for sending such nice trees, as they were perfectly satisfactory. I pretend to know, for I have planted on my place over 1,000 trees before setting those I got from you.

Yours truly, E. T. CROWL.

JAPANESE WINEBERRY.

50 cts. per doz., \$1 per 100, \$7 per 1,000.

Blackberries.

ELDORADO. The most valuable Blackberry ever put on the market, and is endorsed by the strongest commendations from the highest authority on fruits. It has been cultivated 12 years, and under careful test at different experiment stations for four years has never winter-killed or failed to produce a full crop of the finest fruit. The vines are very vigorous and hardy, enduring the winters of the far northwest, and their yield is enormous. Berries very large, jet-black, in large clusters, ripen well together; very sweet, melting, have no hard core, and keep 8 or 10 days after picking with quality unimpaired.

NOTE.—Thousand rates and mixed lot prices furnished on application.

 Six or more grape vines of a variety at dozen rates, by mail, postpaid; fifty or more of a kind at one hundred rate; one hundred grape vines of different kinds, if order amounts to \$5 or over, at one hundred rate; \$10 worth of grape vines at one hundred rate. Box and packing free.

NOTE.—We have an immense stock of leading varieties. Write us before you buy.

DWARF ROCKY MOUNTAIN CHERRY.

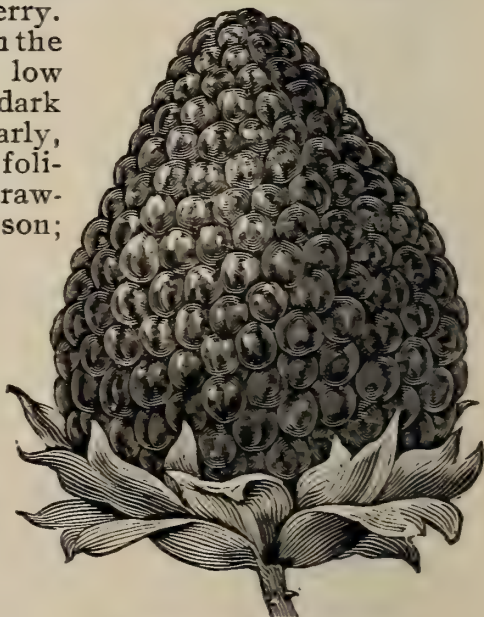

This is an introduction from the west which originally grew wild in the mountains, but has been much improved by cultivation. It is remarkably hardy, a sure annual bearer and productive, of very easy culture, bearing when two years old. Fruit of good size, good flavor, and can be eaten fresh; is also excellent for canning, and is more easily pitted than any other Cherry. Very desirable for the kitchen garden. Price, 1 year, 10 cts. each, \$1 per doz., \$6 per 100; 2 years, 15 cts. each, \$1.50 per doz., \$10 per 100.

DWARF ROCKY MOUNTAIN
CHERRY.

STRAWBERRY-RASP- BERRY.

One of the remarkable recent introductions from Japan. A beautiful dwarf Raspberry, seeming from its characteristics to be a hybrid between the raspberry and strawberry. Bush dies to the ground in the fall; makes a handsome, low spreading plant, with dark green foliage. Fruit is early, stands well out from the foliage, size and shape of a strawberry; color, brilliant crimson; flavor unique. 10 cts. each, 75 cts. per doz., \$5 per 100.

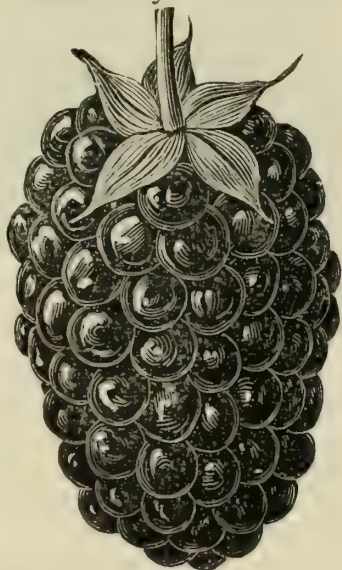

STRAWBERRY-RASPBERRY.

BUFFALO BERRY.

This fruit resembles a small currant, but is of richer taste, and literally covers the twigs and branches. Esteemed for pies, tarts, preserves, jellies, etc. 10 cts. each, \$1 per doz., \$5 per 100.

THE LOGAN BERRY.

This berry is unlike any in previous existence—a hybrid between the raspberry and blackberry. The fruit is as large as the largest blackberry, and is produced in immense clusters. The color is a clear dark red, pleasing to the eye. It partakes of the flavor of both the blackberry and the raspberry—a mild, pleasant, vinous flavor, delicious and peculiar to this berry alone. Excellent for all purposes. Seeds small, soft and few. Berries very firm, and carry well. Vine or cane strong grower, 10 feet and more in a season; enormous bearer. Fruit ripens early, just after strawberries, nearly all being gone before blackberries or raspberries become plentiful. Always sells at a high price. Color resembles the Cuthbert raspberry. 20 cts. each, \$2 per doz.

LOGAN BERRY.

GOLDEN MAYBERRY.

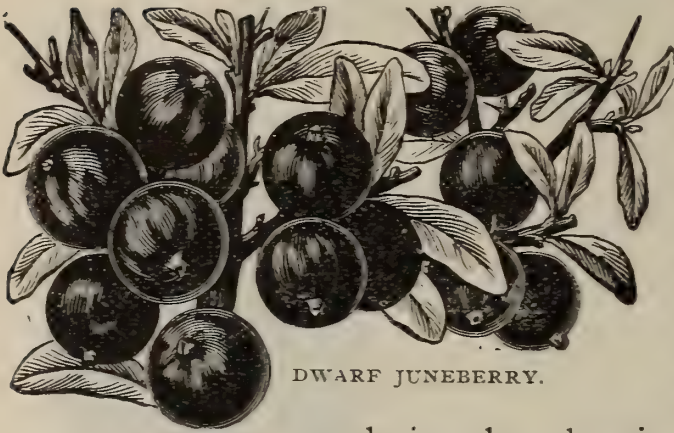

The earliest Raspberry ever known. The berries are of a golden straw color, as large as Cuthbert, and ripen here a month before Hansell, before strawberries, and before the earliest of the standard Raspberries of the past have hardly awakened from their winter rest. The bushes are distinct from all others, growing like trees, 6 to 8 feet high, with spreading tops, and all along the branches large, white, bell-shaped blossoms are pendent, soon followed by the great, sweet, glossy, golden, semi-translucent berries. 15 cts. each, \$1 per doz., \$6 per 100.

CYDONIA JAPONICA (Columbia).

(Edible Japan Quince.)

This new edible fruit has been evolved from the common Japan Quince. The introducer claims that it is very valuable for culinary purposes, and that his crop is engaged in advance for making jelly, which is delicious. Tree is very hardy, healthy, productive and free from disease. 30 cts. each, \$3 per doz.

IMPROVED DWARF JUNE BERRY.

DWARF JUNE BERRY.

purple in color, changing to a bluish black. In flavor it is a mild, rich subacid; excellent as a dessert fruit or canned. The bushes are extremely hardy, enduring the cold of the far north and the heat of summer without injury. 10 cts. each, 75 cts. per doz., \$5 per 100.

ELEAGNUS LONGIPES.

This new and valuable acquisition, a native of Japan, is one of our most promising new fruits, and we highly recommend it for more general planting. The bush begins to bear at two years old, and the fruit is very highly prized by all who have fruited it, for its peculiar piquancy, making a very delicious sauce, considered much superior to the cranberry. 10c. each, \$1.50 per doz.

NEW HARDY ORANGE.

(*Citrus trifoliata*.)

It is a dwarf, of low, symmetrical growth, with beautiful trifoliate, glossy green leaves, and an abundance of large, white, sweet-scented blossoms. The fruit is small, bright orange red in color, having a peculiar flavor; of no value for eating, though it may prove useful in making a lemonade, as the fruit is as acid as a lime. 15c. each, \$1.50 per doz.

ELEAGNUS LONGIPES.
